Dear Matt,

Good to hear you again and glad you are full of beans! You and your department are doing a fine job and we're all very grateful to you for steering us through these difficult times with such a level head.

By way of introduction, Hinpack is a company I own and run and we specialise in food and drink packaging made from biodegradable feedstock. We manufacture as well as distribute so understand simple manufacturing processes and distribution such as those involved in making surgical face masks. We also have strong links in supplier nations in the Far East, Europe and North Africa so we would be able to be consistent.

I have bullet pointed the plan for brevity as I'm sure you are busy.

1) Machinery - Fully automated, non contact servo driven machinery capable of producing c.150k surgical mask to EN14683:2014. Manufactured in China and ready to air freight on call. Delivery and setup time estimated 7-10 days. Raw materials sourced from various countries- all to acceptable standard.

2) Materials pre treated and machinery operated in clean room to standard.

3) QC tested by Nelson Laboratories of Leuven Belgium. Link : <https://www.nelsonlabs.com/en14683-harmonizes-bacterial->

[filtration-efficiency-and-differential-pressure-with-astm-f2100/](#)

4) Final product can be boxed in inners and outers to suit.

5) Can't make any promises on timeline but we would look to be operational sub fortnight. Haverhill or newmarket would be factory locations.

I'm not looking to make my fortune from this and will work at cost supplying this product to the NHS and allied government professions. If you are stuck for PPE and supply is not coping- we can make this happen very quickly.

All the best,

Alex
